computer manufaktur.

Computer Manufaktur.
Our name stands for the efficient combination of alleged opposites.

A passionate approach to technology combined with solid digital skills and expertise is our answer to the constant new challenges arising in the world of information technology. Since 1991, we have been developing IT solutions with the aim of providing companies and institutions with the key to the best possible use of information technologies. Our clients thank us for our work by putting their trust in our company on a long-term basis.

Digital on the inside.
Understandable on the outside.

Since 1997, we have also been working as an Internet agency that develops and implements technically advanced solutions for websites of companies, institutions and authorities as well as for topic-oriented online platforms.

Our wide range of projects and client requests are currently handled by 35 permanent employees in four areas of expertise:

IT SERVICE . SOFTWARE DEVELOPMENT . INTERNET . CONSULTING

IT SERVICE
We provide IT service close to our clients. But what does this mean? When they conclude a service contract with our company, our clients receive a comprehensive on-site analysis of their existing IT infrastructure and their specific user requirements. We use this analysis as a basis to put together a team of technicians that optimally reflects our client's technological demands whilst being able to guarantee reliable support and quick reaction times throughout the entire year. This close proximity is above all appreciated by our less technologically-minded clients, who nevertheless rely on efficiently operating IT systems and who put their trust in our company on a long-term basis, in some cases even over decades. We also, of course, deal with extremely challenging technical solutions such as branch networking, clustering, high availability and virtualisation technologies, whilst always ensuring that our focus remains on achieving efficient and transparent applicability and optimal integration into existing structures. With the IT service provided by Computer Manufaktur, our clients receive all of the services of an internal IT department plus the flexibility and technological scope of a conscientious and intelligent professional IT service provider.

SOFTWARE DEVELOPMENT
We engineer individual applications that offer much more than standard software. In some cases, existing standard software simply doesn't suffice. We counter this problem by developing made-to-measure individual software – mostly based on web technologies – to meet the special needs and requirements of our clients. We use our development know how to help well-known companies in the IT industry, for example T-Systems and heise.de, both of which have been maintaining close collaboration partnerships with Computer Manufaktur for many years. The technologies used in our software development activities are normally based on open source standards such as PHP, Perl, MySQL and Linux and can therefore be easily integrated and expanded.

INTERNET

We develop Internet solutions for companies, research institutions, interest groups and authorities using Drupal or TYPO3 as a basis. Our strength lies in the technically sophisticated implementation of demanding and ambitious plans and projects. We incorporate today's requirements, such as the diversification of devices, the user-friendliness of websites and content management systems, optimisation for search engines and IT security issues, into our development process right from the very start. Our interdisciplinary project teams represent experience and know-how from different areas of expertise. In this way, we ensure that all project phases, namely the concept, development, optimisation and running of your website, are efficiently coordinated within one team. Finally, we work in cooperation with a number of well-known design agencies to produce designs and structures for web projects.

CONSULTING

The IT consulting service utilises our know how in various areas of information technology to benefit for our clients. We use our day-to-day work with IT and our passionate exploration of new developments to generate the expertise and awareness required for comprehensive analyses of existing IT landscapes, consolidation concepts and the integration of company software and websites. We work together with our clients to produce efficient IT solutions that meet requirements on a long-term basis.

OUR SKILLS AND EXPERTISE

A Accessible web design	IT investment planning	Security analyses and audits
Apache web server	IT networks	SEO – search engine optimisation
B Backup solutions	IT security	Server administration
Backup Exec	IT service and support	Server maintenance
Branch networking	**J** JavaScript	Server optimisation
Bulkmailer e-mail marketing	**L** Linux	Service contracts
C Client support	Load balancing	Software development
Cloud computing	**M** Migration between systems	Sophos security solutions
CMS module development	Mobile connections (VPN)	Storage solutions
Concept development	Mobile device management	System development
Consolidation of IT systems	MS Access development	System integration
Content management	MS Exchange	**T** TYPO3 (concept, development, support
D Databases	MS SQL databases	and training)
Drupal (concept, development, support	MySQL optimisation	**U** User help desk
and training)	**N** Network administration	User support
E Emergency planning	Network security	**V** Virtualisation solutions
F Firewalling	**O** Open source	Veeam backup & recovery
Fixed price IT	Oracle databases	VMWare
G Groupware solutions	**P** Perl	VPN solutions
H High availability	PHP	**W** WAN connections (VPN)
High-performance systems	Producing specifications	Web development
HyperV	**R** Remote support	Webshops
I Individual development	Responsive web design	Websites (concept, development
Information portals	Routing solutions	and support)
Internet connection	**S** SAN technology	Windows systems
Intranet solutions	SEA – search engine advertising	**Z** Zarafa server
